

INTERVAL PRIORITY MODE

If **ON** is selected, the camera will adjust shutter speed during interval-timer photography to ensure that exposures are not longer than the interval between photographs.

Options	
ON	OFF

 This option takes effect only when shutter speed is set to **A** (auto).

FLICKER REDUCTION

Reduce flicker in pictures and the display when shooting under fluorescent lighting and other similar light sources.

Option	Description
ALL FRAMES	Flicker reduction is applied to all frames continuous shooting frame rate reduces.
FIRST FRAME	Flicker measurement is taken prior to the first frame only and the same reduction amount is applied to all subsequent frames that flicker may occur.
OFF	Flicker reduction disabled.

-  • Flicker reduction increases the time needed to record pictures.
- **OFF** is selected for **FLICKER REDUCTION** when the electronic shutter is used.
 - Flicker reduction is not available during movie recording.
