

Memory Card Capacity

The following table shows the recording time or number of pictures available at different image sizes. All figures are approximate; file size varies with the scene recorded, producing wide variations in the number of files that can be stored. The number of exposures or length remaining may not diminish at an even rate.

Capacity		SD memory cards 64 GB	
		FINE	NORMAL
Photos	 3:2	2660	3980
	RAW (UNCOMPRESSED)	730	
	RAW (LOSSLESS COMPRESSED)	1380	
	RAW (COMPRESSED)	1950	
Movies*	 4K 2160	79 minutes	
	 FHD 1080	79 minutes	

* Assumes default bit rate.

- The types of memory cards suitable for movie recording vary with the settings selected (68).
- Shots over an hour in length may be recorded across multiple files without interruption. In addition, movies over 4 GB in size will be recorded uninterrupted across multiple files to SD memory cards with capacities 32 GB or less.
