

- 1 Select **K** in the white balance menu. The option currently selected for color or temperature will be displayed.

- 2 Edit the color temperature using the focus stick (focus lever) and press **MENU/OK**.

A fine-tuning dialog will be displayed.

- You can also adjust color temperature in increments of 10 K by rotating the rear command dial.
- Choose from values of from 2500 to 10000 K.
- To exit without fine-tuning white balance, press **DISP/BACK** after choosing a color temperature.

- 3 Highlight a fine-tuning amount using the focus stick.
- 4 Press **MENU/OK**.

The changes will be applied. The selected color temperature will appear in the display.

Color Temperature

Color temperature is an objective measure of the color of a light source, expressed in Kelvin (K). Light sources with a color temperature close to that of direct sunlight appear white; light sources with a lower color temperature have a yellow or red cast, while those with a higher color temperature are tinged with blue.
