

FOCUS RING OPERATION

Choose how the camera adjusts focus in response to the movement of the focus ring.

Option	Description
NONLINEAR	Focus is adjusted at the same rate as the ring is rotated.
LINEAR	Focus is adjusted linearly according to the amount the ring is rotated, but the focusing speed is unaffected by the speed the ring is rotated.

CONTROL RING SETTING

Set functions assigned to the control ring.

Option	Description
STANDARD	The function assigned to the control ring varies with the shooting mode (📖 12).
WHITE BALANCE	Assign white balance to the control ring.
FILM SIMULATION	Assign film simulation to the control ring.
DIGITAL TELE-CONV.	Assign the digital teleconverter to the control ring.
OFF	No function assigned.
