

K: Color Temperature

Adjust white balance to match the color temperature of the light source.

 Color temperature can be adjusted to make pictures “warmer” or “colder” or deliberately produce colors that differ radically from those in real life.

- 1 Select **K** in the white balance menu. The option currently selected for color temperature will be displayed.

- 2 Edit the color temperature using the focus stick (focus lever) and press **MENU/OK**. A fine-tuning dialog will be displayed.

-  You can also adjust color temperature in increments of 10 K by rotating the front command dial.
- Choose from values of from 2500 to 10000 K.
- To exit without fine-tuning white balance, press **DISP/BACK** after choosing a color temperature.

- 3 Highlight a fine-tuning amount using the focus stick.
- 4 Press **MENU/OK**. The changes will be applied. The selected color temperature will appear in the display.
