

2 Press the shutter button all the way down.

- The shutter will remain open for up to 60 minutes while the shutter button is pressed.
- The display shows the time elapsed since the exposure started.
- Releasing the shutter button closes the shutter, ending the exposure. Processing will begin, and the camera will display the processing time remaining.

 Bulb photography is not available in drive modes other than **STILL IMAGE** or multiple exposure or when the electronic shutter is selected for  **SHOOTING SETTING > SHUTTER TYPE**.

 To reduce “noise” (mottling) in long time-exposures, select **ON** for  **IMAGE QUALITY SETTING > LONG EXPOSURE NR**. Note that this may increase the time needed to record images after shooting.
