- Pixel-shift multi-shot photography can be performed via tethered shooting. For this purpose, use FUJIFILM Pixel Shift Combiner.
- The flash will synchronize with the shutter at shutter speeds of 1/2s or slower.
- The following limitations apply to the use of the pixel-shift multi-shot option:
  - Pixel-shift multi-shot photography can only be performed using the electronic shutter.
  - Sensitivity is restricted to a maximum of ISO 1600. Choosing higher values or a setting of **AUTO** results in a sensitivity of ISO 1600, while lower values remain unchanged.
  - The only option available for **RAW RECORDING** is **LOSSLESS COMPRESSED**.
  - Pictures taken with **C** (AF-C) selected for focus mode will be shot in focus mode **S** (AF-S). Pictures taken with **S** (AF-S) or **M** (manual) selected are shot in the chosen focus mode.
  - If the subject or camera moves during shooting, the desired results may not be achieved when the shots are combined.
  -  **SHOOTING SETTING > FLICKER REDUCTION** is automatically set to **OFF**.
  - The value selected for exposure compensation applies to all 20 shots.

## Playback

Pictures taken using the pixel-shift multi-shot option are indicated by a pixel-shift multi-shot icon in full-frame playback (220).
